Pearl

SHIMMER pigment packs are measured by weight and are designed to be added to 100% solids epoxy. One 8oz container should be mixed with 1 1/4 - 1 1/2 gallons of epoxy. Mix thoroughly for 3 minutes to ensure proper dispersion. SHIMMER pigments may be used in other clear vehicles such as polyurethane, acrylic sealers and waterborne epoxies all with different effects. Be sure to thoroughly read all application data on SHIMMER before application.

**NOTE: The color samples are approximate and not exact, physical samples will give a better representation however even physical samples will vary from installation. The uniqueness of this product allows each application to look distinctively different.**
